a) The wet area immediately around the pool, including all soil covered when the pool is at its fullest and all trees, rushes, sedges, etc. which shed branches, dead stems and leaves in this area.

b) The wooded area further away from the pool on the north and west sides, where the ground is drier.

This includes all soil located under these trees as well as the dead branches, herbaceous stems and leaves etc. which fall in this area.

c) The open area to the west of the pool, taking in all ground from the edge of the trees across to the footpath and herbaceous plants along the west boundary of the site.
